Professional Summary

Backend-focused software engineer with strong experience in Python , REST APIs, scalable data systems, and LLM-powered workflows. Experienced in building customer-facing, production-grade applications with a mix of backend engineering and applied AI.

Education

National Institute Of Technology Kurukshetra
Master of Computer Applications CGPA: 8.37

July 2020 - May 2023
Kurukshetra, Haryana

Experience

Amdocs

Software Engineer Associate

August 2023 – Present
Gurugram, Haryana

Project: Data Injection and Monitoring Tool

- Built and maintained a scalable tool for **AT&T, TMO, Vodafone**, enabling cross-DB migration and monitoring (**PostgreSQL, Oracle, Couchbase, Redis**).
- Developed and maintained REST APIs using FastAPI; actively created, debugged, and troubleshoot APIs to ensure reliability and performance in production.
- Processed and transformed backend datasets using **Pandas and NumPy**, focusing on efficient data handling.
- Designed async job scheduler for large-volume data sync improving throughput by **35%**.
- Developed comprehensive automated test suites using **Pytest**, achieving **90%+ test coverage**.
- Used **SQLModel** for backend data modeling and ORM-based persistence with built-in validation.
- Automated CI/CD pipelines using **GitLab + Docker**, reducing manual deployment time by **50%**.
- Tech Stack:** Python, FastAPI, PostgreSQL, Oracle, Couchbase, Redis, Docker, Kafka.

Project: Sarathi AI Chatbot

- Built a **GenAI-powered chatbot** for metadata-driven data validation and transformation.
- Developed REST APIs (**FastAPI**) and metadata store in PostgreSQL, reducing debugging time by **30%**.
- Integrated LLM-based query suggestion module using Hugging Face model(Mistral) and later in house LLM.
- Developed a Python automation script that transformed user input into Rasa conversation flows by generating **prompt-engineered** YAML files via an in-house LLM, significantly
- Tech Stack:** Python, PostgreSQL, Streamlit, Rasa, Docker, Hugging Face, LLM, Azure cognitive services

Projects

Hackerrank Automation Project

- Applied technical and web scrapping skills to create this project. Project aims to add moderators to existing hackerrank coding contest automatically.
- Tech Stack:** Vanilla JavaScript, Libraries such as puppeteer and minimist.

Offline AI Knowledge Assistant

- Built a lightweight, fully offline AI assistant that ingests PDFs/notes and answers queries using local RAG and an on-device LLM.
- Tech Stack:** Python Fastapi, Llama, Streamlit, Llama 3.1, PostgreSQL.

Technical Skills

Languages: Java, Python, SQL, JavaScript, Typescript

Frameworks: Python Fastapi, Springboot, Rasa, React.js, React Native

Developer Tools: Git, Docker, Linux, Azure AI Cognitive Services

Databases: PostgreSQL, Oracle, Couchbase, ElasticSearch

Others: Streamlit, Prompt Engineering, HuggingFace, Kafka ,Cursor AI, Github Copilot
